

# Wooden Charging Cart-32NB

Vega Wooden Charging Cart-32NB was developed as a universal charging station for notebooks and netbooks alike. It's innovative construction enables charging of all notebooks/netbooks at the same time. Simply turn on the switch and all appliances will start to charge via its original adaptors. Vega's charging module provides delayed charging of 8 units simultaneously that prevents electric surcharge. Once the cart is disconnected from the mains socket charging module prevents reverse electric shock. Due to its universal charging possibilities it presents a unique solution especially in classrooms or offices.

# Charging Cart specifications
